DETAILED ACTION

Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. Claim 17 recites the limitation "said second threaded member" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3, 5, 9-12, and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,392,558 to Heibel.

Re-claim 1, Heibel discloses a brake assembly comprising: a caliper (interpreted as part of housing 9, column 4 lines 22-27 describes the brake as a disc brake which will include brake pads); a brake actuator 3 (figure 1) is in communication with the first brake pad, the actuator comprises a first threaded member 21 rotatable about a first axis and a second threaded member 33 rotatable about a second axis; the first threaded member has first threaded characteristics 5 for moving the brake actuator at a first speed and a first force; the second threaded member has

Art Unit: 3683

second threaded characteristics 7 for moving the brake actuator at a second speed and a second force; the first speed is greater then the second speed and the first force is lower than the second force (see column 4 lines 27-30 and lines 48-50). As understood by the examiner the first threaded member 21 is merely for moving the actuator quickly towards the rotor and the second threaded member 33 is responsible for applying the required brake force.

Re-claim 2, a first thread pitch 5 is greater than a second thread pitch 7, see column 3 lines 20-22.

Re-claim 3, the caliper has a first hole (defined by element 19) having threads about the same as the first thread pitch 5, the first hole rotatably receives the first threaded member.

Re-claim 5, the first axis is coaxial with the second axis.

Re-claims 9 and 17, the shaft 1 is rotatable by any well known means, including an electric motor, which will be coupled to the second drive mechanism.

Re-claims 10-12, Heibel discloses a brake assembly, comprising: a brake; a brake actuator; a first drive mechanism 21; a second drive mechanism 33; a first speed of the first drive mechanism is faster the a second speed of the second drive mechanism, a first force is lower than a second force; a first threaded member 21 has first thread characteristics 5, a second threaded member 33 has second thread characteristics 7; a first thread pitch 5 is greater than a second thread pitch 7.

Re-claim 16, the first drive mechanism is sequentially operable relative to the second drive mechanism.

Re-claim 18, Heibel discloses a method of braking, comprising: (1) moving a brake actuator at a first speed and a first force; (2) moving the brake actuator at a second speed and at a

Art Unit: 3683

second force; (3) applying the brake actuator to a brake pad, the first speed is faster than the second speed and the first force is less than the second force, see column 4 lines 18-39.

Re-claim 19, column 4 lines 22-23 discloses that the first step occurs first.

Re-claim 20, column 4 lines 30-39 discloses that the second step occurs after a predetermined threshold is reached.

Allowable Subject Matter

6. Claims 4, 6-8, and 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ohta et al., Zernickel, Keller, Severinsson, and Kawase (JP 7-144636) each teach a two stage brake assembly.
- 8. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Thomas Williams whose telephone number is (703) 305-1346. The examiner can normally be reached on Monday-Thursday from 6:30 AM to 4:00 PM. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jack Lavinder, can be reached at (703) 308-3421. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.
